By usual arrangement with M. Van Waveren & Sons, I am booking orders for their famous NOVELTY BOXES which contain a named collection of 12 dozen, (144 blooms, not bulbs,) in 12 new and unusual varieties. Daffodils should be at their peak during Easter week and orders for blooms will be accepted from March 10th to April 20th. Delivery to any point east of Chicago guaranteed in good condition. Price \$2.50 per box which includes Special Delivery.

DAFFODILS

~ ~ ON ~ ~

PARADE

The Daffodil, also called Jonquil or Narcissus, according to locality, is one of the most beautiful and permanent of all garden flowers; also a superb cut flower for the house, especially if not kept in a dry, heated room. The fact that the earlier varieties bloom even before winter ends is ample proof that they love cool weather. A careful reading of what follows will enable anyone to plant bulbs which will give blooms over a period of from 50 to 70 days. They are among the earliest of all garden subjects, requiring no care or attention. Once planted in well-drained soil, 3 to 6 inches deep depending on the size of bulb, they will thrive and increase indefinitely. It is advisable, however, to dig, separate, and replant every 3 or 4 years as multiplication is so rapid that an area of soil which can support one bulb can not take care of 6 or 8 and allow them all to produce satisfactory blooms.

The most outstanding points about the following list are the + and — figures appearing before each variety. The earliest to bloom is Christmas Glory (class 1A) and the + 31 appearing before it indicates that, in an average season, it will bloom 31 days before Croesus (class 2A) which is a midseason, or peak of the blooming season variety. While Albo Pleno (class 10) with its — 32 indicates its blooming time is 32 days after Croesus and 63 days later than Christmas Glory. There are hundreds of varieties that bloom between these two extremes. Those appearing on this list have been most carefully selected and are outstanding in their various classes. With a little study every one can enjoy a real DAFFODIL PARADE in a way that has never before been possible. Order bulbs now for shipment in early September while varieties are fresh in your memory and earn a 5% discount for cash, allowed only during March and April. It is probable that there will again be a shortage on certain novelty types and early orders will of course receive preference at shipping time. If preferred, they will be sent C. O. D. also in September. Business reference: Bank of Gloucester, Gloucester, Virginia, and M. Van Waveren & Sons, Nuttall P. O., Gloucester, Virginia.

Any one interested in obtaining price and blooming data on varieties not listed can obtain them by writing me. Also I will gladly answer any written questions pertaining to your problems with Daffodils.

MISCELLANEOUS BULBS FOR SPRING AND FALL PLANTING

EXPLANATION OF NUMBERS, LETTERS AND SYMBOLS

The + — figures indicate relative blooming time. See Text on Page 1. Varieties marked (A.M.) indicate they have been awarded Certificates in the great English and Dutch Shows.

*** The Very Finest,
** Outstanding.

* Reliable and Dependable.
Mid. Midseason.

1A. Yellow Trumpet. (Both trumpet and perianth are yellow. The Trumpet or crown is as long or longer than the perianth segments.)

	Price per 10 Bulbs
+7*** Aerolite—Beautifully proportioned medium yellow Giant Trumpet	\$2.40
+31* Christmas Glory—The earliest of all to bloom—solid golden yellow	1.50
+14** Citronella—Uniform lemon yellow, large emperor odubled in size	4.00
—9* Cleopatra (A.M.)—Latest of yellow Trumpets to bloom	2.40
+3*** Dawson City—Not a Giant but one of the most perfectly formed yellow Trumpets	2.90
+12*** Erna Rubenstein—Edge of trumpet beautifully rounded—golden yellow	3.20
+7*** Golden Sunrise—Deep golden yellow with expanded Trumpet	.45 each
—5** Harold Beale—A very valuable late blooming Giant	2.80
—3** Kimberley—Large and best of the new lemon yellow family	.45 each
+11* King Alfred (A.M.)—The yard stick by which all yellow Trumpets are measured	1.20
+8*** Lord Wellington—Larger, later and much better form than King Alfred	4.00
+2* Olympia (A.M.)—The old and popular Emperor doubled in size	2.00
+9*** Robinhood—New and outstanding—a real orange Giant Trumpet	.45 each
+10** Wagner's Rheingold (A.M.)—Blooms with King Alfred but entirely different	3.80

1B White Trumpet. (Both Perianth and Trumpet, are white or almost white—otherwise same as 1A.)

+9*** Beersheba (A.M.)—Constant prize-winner in pure white Trumpet	1.10 each
—2** Imperator — The largest of the white trumpets	4.00
+4*** Kantara—Larger and considered by some as better than Beersheba	1.20 each
+10** Lovenest (A.M.)—Pinkish, apricot Trumpet in great demand	.60 each
+2* Mrs. E. H. Kreglage (A.M.)—Popularly and justly called the White King Alfred	2.40
—4*** Mrs. R. O. Backhouse (A.M.)—World famous as a Pink Trumpet, but really a 4A	2.20 each
—5** Quartz (A.M.)— One of the best new whites and last to bloom	.60 each
+8*** Roxane (A.M.)—An up and coming new comer in the war among the white trumpets	.50 each

1C Bi-Color Trumpet, (Perianth white, Trumpet yellow, Otherwise same as 1A.)

+1*** Aeolus—The most perfectly formed giant bi-color	4.00
+6* Augusta—A new strong growing bi-color	3.00
—6*** Ediba—The most promising new bi-color in years	4.00
+4** Locarno—Tall strong grower, very durable flowers	4.00
+1*** Mme. Van Waveren (A.M.)—Largest of the giant bi-colors, constant winner	4.00
+19* Moonlight—Opens yellow but petals change quickly to soft white	3.20
—2*** Mrs. John Hogg—Still winning prizes on her grand form—golden yellow and white	3.00
+7* Spring Glory—Most satisfactory bi-color in its price range	1.70
+3* Van Waveren Giant (A.M.)—The variety that made Giant Trumpets famous	2.40

2A Incomparabilis with Yellow Perianth. (Large Chalice-cupped Daffodils, cup measures from 1/3 to nearly the length of the Perianth Segments.)

—10** Abelard (A.M.)—Large yellow cup, orange edge, tall and late	4.00
—1*** Bokhara—Deep orange cup in beautifully formed perianth	.70 each
—2** Brightling (A.M.)—Large flat red cup—yellow petals—tall grower	2.10
Mid. Croesus (A.M.)—Deep orange cup—yellow petals—much in demand	1.40
+4*** Damson (A.M.)—Large deep crimson cup—cream petals, strong tall grower	.55 each
+5*** Elegance—Striking contrast in scarlet and deep orange, strong grower	1.30 each
+12* Fleur D'Oranger—Orange and yellow—prodigious bloomer	4.00
+11* Gaiety—One of the newer Incomps, orange red cup, yellow petals, strong grower	.50 each

—2* Beat All—Striking large yellow cup, enormous white petals	2.10
+6*** Buoyant—Large yellow cup with broad orange band	.60 each
—2*** Dick Wellband (A.M.)—One of the few red cups to hold color under all cond.	1.40 each
Mid. Franciscus Drake—Large flaming red cup, white petals, tall	3.40

Planting Instructions and Special Offers

Believing that sufficient information is seldom given for success in raising certain bulbous plants, I have had growers who raise the three items listed below, prepare the following, which I hope will be most useful to my customers.

ISMENE CALATHINA, also known as Peruvian Daffodil is of the Amaryllis family and is evergreen in deep south. Its umbels of large white flowers, 2 to 4 per stem, are most attractive. When gardeners become familiar with its unusual beauty and fragrance it will be much more widely planted, for not only is it a super-subject for the garden, but also a grand cut flower for the house.

Plant in full sun when the ground is thoroughly warm, May in the middle states, June in the northern. For best results soil should be spaded up to a depth of 2 feet and bulbs set so their base is at least 8 inches below the surface level. As roots are 2 or more feet long it can stand dry spells, but does best when watered every two weeks.

Price \$.25 each or \$2.00 for 10 Bulbs

STERNBERGIA LUTEA. Looks like and is commonly called an Autumn Crocus, but is not even a relative. It has been used extensively in the plantings at Williamsburg and deserves its ever-growing popularity. **INSIST** on getting your bulbs in late June or early July. (Not in September or October.) It prefers partial shade and a light sandy soil. Set

Broad strap like leaves appear about 4 weeks after planting and the blooms, on 14 to 18 inch stems, follow in a few weeks. Foliage remains green throughout the summer till killed by frost, which is nature's signal that digging time is at hand. Dig carefully with a potato fork or similar implement and avoid breaking the long fleshy roots which should be left attached to bulbs.

After curing and drying for several weeks they should be stored in a warm basement or furnace room. 50 to 60 is ideal storage temperature. These bulbs require no dipping or soaking in antiseptics, nor do foliage or flowers require spraying. When replanting the following spring, separate only those bulbs which have detached themselves from the root crown of the main bulb.

bulbs so their base is 5 inches below ground level. Narrow dark green leaves appear late in August followed soon by beautiful yellow crocus like flowers on 6 to 8 inch stems. North of Washington, D. C., protection in the form of a light mulch is advisable the 1st winter. Increase is rapid and bulbs should be dug and replanted every 3 or 4 years. Dig when leaves die in the spring.

Price \$2.50 for 10 Bulbs

LYCORIS RADIATA, also known as Nerine Sarniensis, Guernsey Lily and Spider Lily. Most beautiful and lasting as a cut flower and grand to plant in clumps under or near shrubs. A circle of 8 to 12 bright red flowers on a 16-inch stem. Bulbs should be planted late in June or early July in partial shade, the type of soil does not seem to matter. Set bulbs so the neck is not more than 1 inch below surface when ground has settled. If planted deeper it will take 2 or 3 years for the bulb to adjust itself to proper depth. This very necessary shallow

planting is the reason they are not hardy north of Washington, D. C., unless heavily mulched. Bulbs planted in June or July should bloom early in September without leaves, as these die in June and do not reappear till after the flowers are finished. However, as it is a bulb that truly resents transplanting, it may not bloom the first year, even if they are dug and planted correctly; but will surely perform if left another year when the gorgeous blooms will be ample reward for the long wait. Does best when allowed to grow into large clumps over a period of 6 to 8 years.

Price \$2.20 for 10 Bulbs

THE HODGE FODGE SHOP

GLOUCESTER, VA.

ANTIQUES - CORN MEAL - GIFTS - HAMS - HANDICRAFT
